

# Custom splash screen in X-Plane 11

## Table Of Contents

- [1 Find the default background](#)
- [2 Insert your own background](#)

In this tutorial, we will explain how to replace the default splash screen of X-Plane 11 with a custom screenshot of your choice.

## 1 Find the default background

The default background is stored in the subdirectory `X-Plane 11 \ Resources \ bitmaps \ interface11`. Browse this directory and search for the file `image_background_screenshot_for_stack.png`. Rename this file to `image_background_screenshot_for_stack.OLD`. If the file extensions are not visible due to local settings, it is also sufficient to simply add `_old` to the file name while renaming.

## 2 Insert your own background

Next, simply put your own image or screenshot to this subdirectory and rename it to `image_background_screenshot_for_stack.png`.

With the next start of X-Plane 11 you should see your own image.
